RESEARCH INTERESTS

General Interests: Bayesian Learning and Statistical Inference Methods with application to several domains like Deep Learning, Multimedia Information Understanding using probabilistic modeling.

- Deep generative model like Generative Adversarial Network, Variational Autoencoder, *etc.*
- Learning representations from high-dimensional data.
- Corresponding problems in relevant fields like computer vision, *etc.*

EDUCATION

Shanghai Jiao Tong University (SJTU) March 2017 - March 2019
M.S. in Information Engineering (Sino-French Cooperative Education Program).
GPA: 3.87/4.0

Telecom ParisTech ENST September 2016 - March 2017
Grande Ecole Engineer Cycle in Data Science and Computer Networking.
Average Course Grade: A

Shanghai Jiao Tong University (SJTU) September 2012 - August 2016
B.S. in Information Engineering (Sino-French Cooperative Education Program).
GPA: 3.66/4.3

RESEARCH EXPERIENCE

- Computational Cognition, Vision, and Learning, Johns Hopkins University** May 2018 - Dec 2018
Visiting Student, advised by Prof. Alan L. Yuille
- Investigate segmentation on multi-phase medical images: the abdominal CT scans often have arterial and venous phases, which contain complementary information in segmenting organs.
 - In a view of generative model, explore the intrinsic gap between ideal and real world scenario that causes difficulty in using multi-phase knowledge.

- Propose a framework that combine knowledge transfer and segmentation to incorporate useful information from both phases to improve segmentation. The trained model can also perform on the mono-phase datasets.
- This work is under review of ICCV 2019.

Cooperative Medianet Innovation Center, Shanghai Jiao Tong University March 2017 - July 2018
Research Assistant, advised by Prof. Ya Zhang

- Reserch on Deep Bayesian Learning and generative model, specifically Variational AutoEncoder (VAE) in the perspective of information theory.
- Explore why the trade-off between representation learning quality and likelihood maximization exists in VAEs, and how to balance the trade-off effectively, through Modeling with Fisher information and Shannon entropy, and with the *Uncertainty Principle*.

Telecom ParisTech INFRES/IC2 Group September 2016 - March 2017
Research Assistant, advised by Prof. Talel Abdesslem and co-advised by Prof. Ya Zhang

- Research on Deep Bayesian Learning and deep matrix factorization and implement the latent representation that can model the correlation between user and item to build an effective recommender system.

Cooperative Medianet Innovation Center, Shanghai Jiao Tong University July 2015 - August 2016
Undergraduate Research Assistant, advised by Prof. Ya Zhang

- Research on two-stage combination of generative model and deep learning and find out how to learn hierarchical representation using topic model and low-level features extracted with deep learning based method.
- Propose an application in mining descriptive characteristics of a region from social images, using the learned representation.

SELECTED PROJECTS

Data Mining Contest Spring 2017
Winner in contest of course "Data Mining", lectured by Prof. Michalis Vazirgiannis

- Predict missing links in a citation network.

Group Theory Research March 2015 - June 2015
Supervised by Prof. Alain Chilles

- Propose an algorithm to compute the cardinal of a finite group based on Schrier Lemma and relevant applications.

SELECTED HONORS AND AWARDS

Outstanding Graduates of Shanghai (Top 5% in Shanghai)	2019
National Scholarship for Graduate Students	2017
Excellent Teaching Assistant	2017
Outstanding Graduates of Shanghai (Top 5% in Shanghai)	2016
Excellent Undergraduate Thesis in SJTU (Top 1% in University)	2016
Meritorious Winner in Mathematical Contest in Modeling (MCM)	2015
Undergraduate-Entrance Bursary (Top 1% in Chinese University Entrance Exam)	2012

SELECTED EXTRA-CIRRICULAR ACTIVITIES

Teaching Assistant of Data Structure	Spring 2018
Teaching Assistant of C programming language	Fall 2017
Teaching Assistant of Data Structure	Spring 2017
